* The **photovoice exhibition "Through our eyes"** by Anna Szolucha will be exposed in the seminar room during the pre-conference and various ISA47 panels. **"Through our eyes"** is a photovoice exhibition that shows what it means to live with the prospect of fracking. It captures residents' individual perspectives in their own words and images. The exhibition comprises of 34 photographs taken by local residents who are concerned about the impacts of shale gas developments in Lancashire and the UK. The idea of the exhibition came from Anna Szolucha research project (repowerdemocracy.net) that explored the social impacts of shale gas development. One of the early findings of this study is that even before fracking starts, it has profound impacts on local communities.

ISA47 Program organizers: Priska Daphi, Paolo Gerbaudo, Geoffrey Pleyers

ISA47: Fostering Global Perspectives on Social Movements

The Research Committee 47 “Social Classes & Social Movements” of the International Sociological Association brings together hundreds of social scientists from all continents. It provides a unique platform to share and develop perspectives on and analyses of current, recent and past social movements around the world, as much the ones that strike mainstream media headlines as those that discreetly transform politics or daily life.

ISA-RC 47 has a particular interest in connecting the sociology of social movements with general sociology and challenges faced by our societies. The research committee was founded with the conviction that the study of social movements provides elements for a better understanding of specific social actors and society as a whole, as Alain Touraine has shown. Social movements are both products and producers of social change and society as a whole. They thus provide valuable empiric insights and sometimes innovative solutions to tackle with practical, political or epistemological challenges. As Melucci stated, social movements “show glimpses of possible futures, and are, in some respects, the vehicles of realization of these very futures”. These approaches allow to avoid the traps of both “professional” sociologists’ hyper-specialization and movements’ organic intellectuals.

To foster global outlooks on social movements and society, we aim at avoiding as much methodological nationalism as methodological globalism by combining global issues with multi-site and multi-scale empirical fieldwork. Social sciences need to overpass ‘**methodological nationalism**’, **understood as the presumption that the nation-state is an economic, political, geographical, social and cultural monolith, and that this monolith should be the unit of all social analysis**. However, to take global dynamics and actors into account should not lead to sociological approaches that neglect actors, claims and challenges at the local or national scales.

To foster a global outlook also **requires a better inclusion of actors, claims, cosmovisions and theories from the Global South and a combination of various scales of action and analysis (from the local to the global)**. It requires analyzing social movements, society and social transformations beyond national and regional borders, and from the scale of the individual subject to the planet.

The relations between researchers and social actors and their contributions in public debate are two other major epistemological concerns. The concept of social movement as historical actor and heuristic tool (Touraine, Melucci), the sociology of absence and emergence (Sousa Santos) and a sociology of action that fully takes into account actors’ reflexivity, practices and limits provide concrete ways to go beyond the dichotomy between research activism and a claim for axiological neutrality. To combine these perspectives fosters an approach that allows to learn from and with actors and to contribute to scholar research and public debates.

openMovements is the ISA47 online platform that aims at providing critical and empirically-based perspectives on contemporary social movements, those which threaten the democratic emancipatory project as those which promote a deeper democracy, movements which gain mainstream media headlines as much as those which discreetly transform daily life and/or politics, whether at the local, national and global level.
